

Practice Quiz: Hello World

Total points 5

1.Question 1

What are functions in Python?

1 / 1 point

Functions let us to use Python as a calculator.

Functions are pieces of code that perform a unit of work.

Functions are only used to print messages to the screen.

Functions are how we tell if our program is functioning or not.

Correct

Right on! Python functions encapsulate a certain action, like outputting a message to the screen in the case of print().

2.Question 2

What are keywords in Python?

1 / 1 point

Keywords are reserved words that are used to construct instructions.

Keywords are used to calculate mathematical operations.

Keywords are used to print messages like "Hello World!" to the screen.

Keywords are the words that we need to memorize to program in Python.

Correct

You got it! Using the reserved words provided by the language we can construct complex instructions that will make our scripts.

3.Question 3

What does the print function do in Python?

1 / 1 point

The print function generates PDFs and sends it to the nearest printer.

The print function stores values provided by the user.

The print function outputs messages to the screen

The print function calculates mathematical operations.

Correct

You nailed it! Using the print() we can generate output for the user of our programs.

4.Question 4

Output a message that says "Programming in Python is fun!" to the screen.

1 / 1 point

```
1 print("Programming in Python is fun!")
```

Programming in Python is fun!

Correct

Great work! We're just starting but programming in Python can indeed be a lot of fun.

5.Question 5

Replace the ___ placeholder and calculate the Golden ratio: $(1+\sqrt{5})/2$.

Tip: to calculate the square root of a number x, you can use $x^{1/2}$.

1 / 1 point

```
1 ratio = (1+5**0.5)/2
2 print(ratio)
```

1.618033988749895

Correct

Awesome job! See how we can use Python to calculate complex values for us.
